DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to a method of altering the regulation of gene expression, classified in class 435, subclass 440, for example
- II. Claim 4, drawn to a method of altering regulation of follicular development, atrophy and/or ovulation, classified in class 435, subclass 375, for example.
- III. Claim 5, drawn to a method of altering differentiation of granulosa cells, classified in class 435, subclass 377, for example.
- IV. Claim 6, drawn to a method of altering beta-tubulin gene expression , classified in class 435, subclass 464, for example.

The inventions of groups I-IV are directed to different inventions which are not connected in design, operation, and/or effect. These methods are independent since they are not disclosed as capable of use together, they have different modes of operation, they have different functions, and/or they have different effects. One would not have to practice the various methods at the same time to practice just one method alone.). In the instant case, the methods/processes have different functions and effects and are not obvious variants of eachother. For example, a method of altering the regulation of gene expression and a method of altering cell differentiation have different

effects and one would not expect one to be obvious over the other, thus searching for a method of altering gene expression would not overlap in scope with method of altering regulation of ovulation.

The several inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches (as indicated by the different classification). The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or even make obvious another group.

Because these inventions are distinct for the reasons given above and the search required for one group is not required for the other groups, restriction for examination purposes as indicated is proper.
